QUICK GUIDE TO CLEANER WATER

A CONCISE OVERVIEW OF DALLAS WATER,
FILTRATION BENEFITS AND HALO SYSTEMS.

WWW.JIMSPLUMBINGNOW.COM

WHAT'S IN YOUR WATER?

Even after treatment, contaminants may affect your health and home. The Dallas and Fort Worth metroplex sources all its water from surface sources like local reservoirs and rivers.

Key Concerns Found In Dallas Water:

- PFAS (Forever Chemicals) – Man-made chemicals linked to cancer, thyroid issues and liver damage. Three types of PFAS are present, with some high levels exceeding EPA limits
- Disinfecting Byproducts (DBPs) – Formed when chlorine reacts with organic material. These chemicals are linked to cancer and reproductive harm. Examples include Chloroform and others present at 8-80x higher than recommended levels.
- Hexavalent Chromium (Chromium-6) – A known carcinogen found at levels far above the 0.02 ppb recommended by the EWG.

DID YOU KNOW?

Even after treatment, contaminants may affect your health and home. The Dallas and Fort Worth metroplex sources all its water from surface sources like local reservoirs and rivers.

HOW A WHOLE-HOME FILTRATION PROTECTS YOUR HOUSEHOLD

Poor water quality, including chlorine exposure and hard water, can quietly affect your home over time.

BAD WATER CAN LEAD TO...

- **Prolonged Damage & Wear** – Limescale buildup that clogs showerheads and damages water heaters. This also leads to premature wear on appliances and plumbing fixtures.
- **Poor Health & Comfort** – Dry skin and dull hair from chlorine and mineral exposure.
- **Nothing Feeling Clean** – Spots on dishes and glassware, or water that smells or tastes “off”.

The HALO Difference

Poor water quality, including chlorine exposure and hard water, can quietly affect your home over time.

A HALO whole-home filtration system provides clean, conditioned water from every tap.

This means:

- **Protection** – Cleaner, better-tasting water that’s safer for your family and your plumbing
- **Convenience** – HALO systems condition water without salt, electricity or routine maintenance.
- **Conditioning** – The technology suspends hard water minerals to combat limescale and helps prevent corrosion

WHAT ARE THE HALO SYSTEMS?

HALO Water Systems are leaders in whole-home water filtration, offering eco-friendly solutions.

KEY FEATURES OF HALO SYSTEMS INCLUDE:

- **Salt-Free Conditioning**
- **Zero Maintenance**
- **Whole-Home Protection**

Our Most Popular HALO Systems

- **HALO 5** – A 5-stage whole-home filtration and conditioning system. It removes chlorine, chloramines, heavy metals, pesticides and uses the HALO ION Inline Water Conditioner to combat limescale buildup.
- **H2 ZERO ULTIMATE** – Focuses on ZERO electricity, ZERO backwash and ZERO waste. It uses High Activity Carbon (HAC) for chlorine reduction and the HALO ION Inline Water Conditioner to suspend hard water minerals.
- **HALO Mini 3** – A 3-stage system that captures sediment, uses a premium UltraFlow carbon cartridge and includes the permanent HALO ION 2.0 In-line Water Conditioner for scale prevention and dissolving existing scale.
